

# EZ❖TRAP

## Introduction and Overview

We have positioned ourselves to be the leading experts in condensate traps and condensate overflow switches required in central airconditioning systems and we specialize in the manufacture of a full range of traps, components and overflow switches to suit any requirements within this field.

All of our traps incorporate our innovative and patented see through feature and are designed for ***easy installation, easy inspection and easy cleaning***. In addition we offer the only trap available which incorporates an integral floatswitch to warn of blockages in the trap itself or in the condensate line downstream,

We are the only manufacturer to offer the unique and patented **cross inlet trap** which permits the contractor to clean the outlet of the drain pan without access to the interior of the Air Conditioning unit. All models are currently available in ¾” and 1” sizes as standard.

We are in addition, the only manufacturer to offer the **ULTRATRAP** series of patented waterless traps. These float operated traps, which are also transparent and cleanable, will not permit the flow of air in either direction regardless of the presence of water and offer substantial energy savings as well as IAQ enhancement.

EZTRAP also offers a custom service to the Air Conditioning industry in which, using our advanced technology, we will design a custom trap package tailored to the specific requirements of the customer.

To simplify identification, all of our trap and overflow switch products are divided into specific series:

**100 Series** Covers our range of plain conventional P traps without switches.

**200 Series** Covers our range of conventional P traps with integral overflow switches.

**300 Series** Covers our range of traps and overflow switches with electronic sensors.  
**Currently not available.**

**400 Series** Covers our range of parts, accessories and components.

**500 Series** Covers our range of traps and overflow switches with O rings.  
**Currently not available.**

**600 Series** Covers our range of combination trap and overflow switch kits.
