

EZ-TRAP

600 Series

This is our series of combination packages which include a plain trap which is fitted to the primary condensate and a separate overflow switch which is fitted directly to the drainpan overflow outlet.

While the 200 series of switched “ SMART TRAPS “ is an excellent method of alarming both the trap itself and the drainline downstream, it cannot react to a blockage which is upstream of the switch, either in the drain pan outlet or in the PVC stub connecting the trap to the outlet.

To address this issue, we developed the 600 series. By repositioning the overflow switch from the trap inlet to the drainpan overflow outlet, we can now offer the ability to react to a blockage anywhere in the drainage system, from the drainpan outlet through the trap, all the way to the point where the drainline emerges from the home.

The trap and all fittings, are UV resistant PVC which is glued with standard PVC adhesive. Caps are UV resistant polypropylene or Polyethylene.

They are sold in kit form which usually includes the trap plus capped inlet and outlet fittings as well as a male adaptor and cleaning brush, however some are also available in a stripped down kit which omits the brush and adaptor for cost reduction purposes.

The kit includes the floatswitch assembly and fitting, with snap on terminal cover, as well as 4' of 3 core color coded cable permitting the third wire to be connected to an optional alarm.

All kits include a wiring diagram on the installation instructions, and on the UL label on the trap, and a cleaning label for application to the airhandler in the vicinity of the trap.

Also Included are a self adhesive red contractor warning label for application to the condenser and a self adhesive blue homeowner information label for application to the airhandler.

THIS OPTION OFFERS THE BEST COMBINATION OF VALUE, CONVENIENCE AND PERFORMANCE FOR THE CONTRACTOR.

Models currently offered in this range include:

EZT-626 Includes the EZT-113B trap kit and an EZT-226 overflow switch kit.

EZT-656 Includes the EZT-150 Ultratrap waterless trap kit and an EZT-226 overflow switch kit.

ALL OVERFLOW SWITCHES USED IN THIS SERIES ARE UL LISTED.

We will soon offer other options in this series to accommodate different sizes and configurations.
